BIZZSMS.Modul V5....the easy to integrate SMS Gateway

The **Short Message Modul** for your software

BIZZSMS.Modul is a software modul, which can be integrated in existing software solutions, in order to send SMS by your application.

The developers from BIZZSMS.Modul focussed on achieving a highly simple integration into existing solutions.

BIZZSMS.Modul is a fully functional 32 bit application, which automatically sends and receives your generated SMS.

By the open data base connectivity (ODBC) a short integration time into existing solutions is guaranteed. Sending of SMS is done by the interface Internet (WEB SMS Gateways) or mobile phones.

The sent SMS are comprehensible and by this usable in all day business.

Normal text messages (160 characters) can be sent as well as unicode messages (special characters up to 70), or Flash SMS messages.

Further you can forward incoming SMS as Email.

Also you can send SMS through the build in SMTP server by using a email software as front end for sending messages.

Integration

The integration of the module is very simple. By the open data base connectivity of MS Access every application gets quickly capable of sending SMS.

No bothering handling with program libraries.

You save out of your application your SMS, which shall be sent, to the outbox table of BIZZSMS.Modul and BIZZSMS.Modul manages the rest.

You can use any imaginable program language for integrating BIZZSMS.Modul.

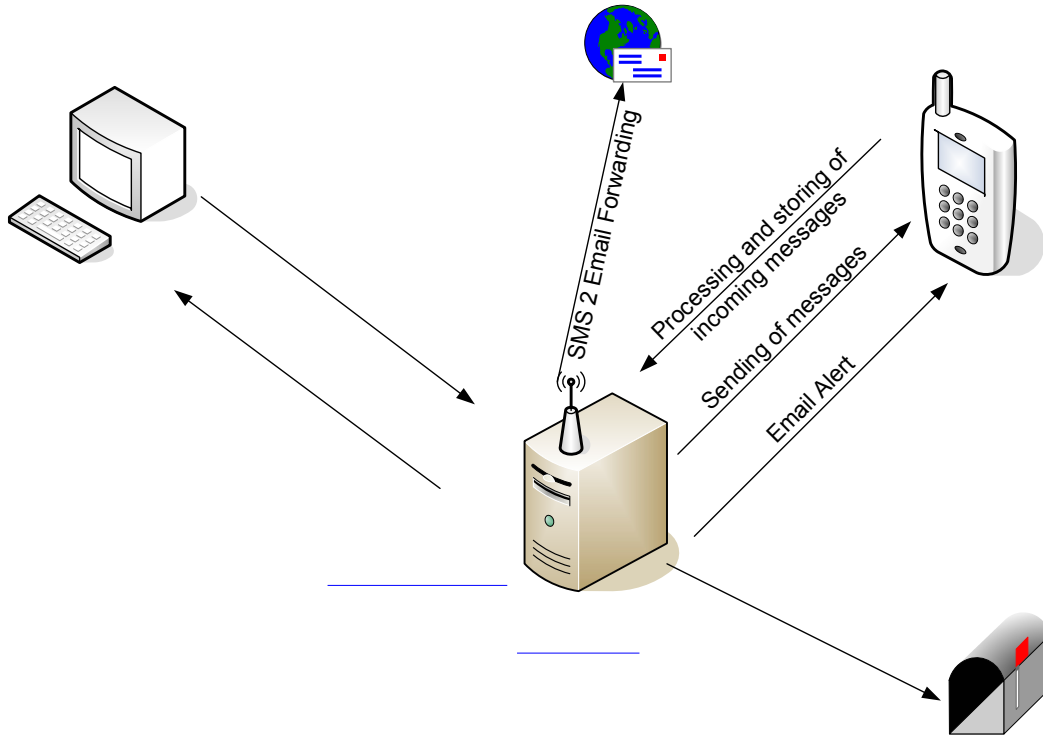

You have access to sent and received SMS.

For you it is not easier to get your application capable of SMS sending.

Examples for the integration and programming you find in every BIZZSMS.Modul Software bundle.

Produkt Features:

- ❖ Clearly arranged
- ❖ Easy to integrate trough database access or ODBC or SMTP
- ❖ Text file processing
- ❖ Comprehensible sending and receiving SMS
- ❖ Inbox, Outbox, Sentbox, transmitting errors at a glance
- ❖ Option of email forwarding of incoming SMS
- ❖ Email2SMS trough Build in SMTP Server
- ❖ Email Account Alerting
- ❖ User friendly and cost effective
- ❖ Short integration time
- ❖ Unicode messages
- ❖ Flash messages
- ❖ Productive
- ❖ 32 Bit application
- ❖ fast sending engine (via Internet or mobile phone)

System requirements :

IBM compatible PC: min. 586/233
with 64 MB RAM OS: Windows 95, 98, ME, 2000 , NT, XP

To send short messages Cell phones can be used or the SMS gateways of the companies clickatell.com, vodazone.co.za, seriensms.de, websms.com .
